

# The Royal National Orthopaedic Hospital Case Study

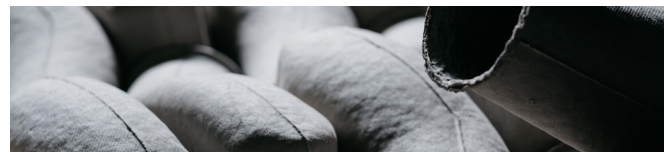

**The Royal National Orthopaedic Hospital NHS Trust (RNOH) is the largest orthopaedic hospital in the UK and is regarded as a leader in the field of orthopaedics worldwide. It provides a comprehensive range of neuro-musculoskeletal health care, ranging from acute spinal injuries or complex bone tumours to orthopaedic medicine and specialist rehabilitation for chronic back pain sufferers. This broad range of services is unique within the NHS, and as a national centre of excellence the RNOH treats many complex and rare conditions.**

## The Challenge

RNOH needed a complete refurbishment of a sluice room within a very tight time frame and budget. The complete solution that DDC Dolphin offers, with its full range of sluice room products and the ability to handle bespoke requirements, was one of the major factors for approaching DDC Dolphin to tender for the project.

## The Solution

Thanks to the technical capabilities of DDC Dolphin, we were able to achieve the design that Prentice Lloyd, the Project Manager had requested, providing a full illustration and CAD drawing of the finished product. With our expertise and range of products, we were able to meet the brief within the time frame and budget which gave the RNOH the confidence to move forward with us.

## The Outcome

*“ DDC Dolphin were able to offer us a complete solution which meant that as Project Manager I had a single point of contact throughout the whole process, which made it much easier for me to manage. Together we were able to coordinate the project effectively and within the time constraints, saving time and money. ”*

Prentice Lloyd, Project Manager, Royal National Orthopaedic Hospital
