

DDC

Aqua Shield

Wash & Scale Inhibitor

Advanced Protection for all **Bedpan Washer Disinfectors**

Formulated to enhance cleaning prior to steam disinfection and significantly reduce scale build-up.

Aqua Shield keeps your washer disinfecter performing efficiently and hygienically.

Manufactured for

Aqua Shield

Wash & Scale Inhibitor

Aqua Shield has been formulated to enhance performance, support infection control, and extend the life of bedpan washer disinfectors.

This powerful solution works with all DDC Panamatic models and other manufacturers machines subject to compatibility & performance testing*. It breaks down scale, organic waste and residue that compromise hygiene, helping to prevent breakdowns and maintain disinfection standards.

Product Benefits:

- **Aqua Shield is a specialist scale inhibitor**, designed to prevent limescale build-up through advanced chelation and threshold inhibition technology.
- **Non-ADR classified**, making storage, handling and transport simpler and safer for your team.
- **Protects key internal components** by actively preventing scale formation, reducing the risk of damage and unplanned downtime.
- **Delivers powerful cleaning performance**, ideal for the high standards required in healthcare settings.
- **Keeps spray nozzles and heating elements clear**, helping to maintain consistent cleaning, disinfection and machine efficiency.
- **The formulation contributes** to reducing existing scale** as well as breaking down proteins, organic waste and residue for a more thorough clean
- **Compatible with all DDC Panamatic models.** Compatibility with other manufacturers' machines is subject to successful compatibility and performance testing.
- **Extends the working life of your equipment** by reducing wear and maintaining optimal operation over time.

* Subject to DDC advice on dose rate and compatibility

** Reduction in existing scale deposits are dependent on many factors and can't be guaranteed

The steam generator is an essential part of the bedpan washer and must be protected against the formation of scale which can lead to longer heating times, higher power consumption, overheating and the potential for irreparable damage to the heating element.
